NOTES: As part of Chart’s continuous improvements we have transitioned to a more robust 2.0A power supply as of July 1, 2016. The new part number is PN 20965617. The previous power supply (PN 11795030) was rated at 1.2A.

To help maintain our traditional backward compatibilities, the new power supply can be used on the TEC2000’s, TEC3000’s, and Vario Pros. It will also be used on the Chart MVE TS controller. Its dimensions/appearance will be exactly the same as the previous power supply.

The new power supply will be a direct replacement and will not require any adaptors. All upgrade kits/service parts will transition to the new power supply.

Figure 1 below shows the previous and new power supplies. Pictured on the left is the previous power supply that is rated at 1.2 A. The new power supply pictured on the right is rated at 2.0 A.
Figure 1. Pictured left is previous power supply (PN 11795030). Pictured right is new power supply (PN 20965617).
