

## Alcon Refurb Kit

An Alcon Refurb Kit is available for 24VDC Alcon solenoid valves. This kit includes the plunger and plunger housing. Since the coil is not included, it cannot be used to repair a solenoid that has low resistance. Please use part number 13390992 to order.

## Freezer Naming Convention Reminder

As of January 4, 2010 all full auto freezers were equipped with hot gas bypass as a standard item. Also, battery backup was listed as an optional accessory. For the convenience of our internal and external customers, the same freezer part numbers were used. The descriptions were changed to distinguish freezers that have hot gas bypass as a standard feature and to eliminate confusion among customers. The “-190F” in the old naming convention was often mistaken as a reference to degrees Fahrenheit. Previously, there were three full auto freezer offerings: full auto, full auto with gas bypass and battery backup, and MDD Europe freezers. Now there are only two full auto freezer options. The naming conventions are as follows:

MVE Freezer Options	Old	New Description
Full Auto Freezer	*F	AF-GB
Full Auto Freezer w/Hot Gas Bypass	F-GB-BB	AF-GB
MDD Freezer (European Use Only)	F-GB-BB-MDD	F-GB-BB-MDD

\*F is no longer available this has been completely replaced by AF-GB

Note: Battery backup is offered separately as a field installed option, except for MDD freezers, which has battery backup as a standard.

AF is an acronym for Automated Fill.

## MVE Datalogger Battery Replacement

The battery in the MVE Datalogger can be replaced; however, this is not something that should be done in the field. Replacing the battery requires the unit to be recalibrated. An official recalibration can only be performed at a certified Chart facility.

## Aluminum Dewar Lid Change

Select dewars from the SC, XC, and vapor shipper lines will now have composite lids instead of aluminum. The new lids will be slightly more durable and aesthetically pleasing.
